## DM7556/DM8556 TRI-STATE ${ }^{\circledR}$ Programmable Binary Counters

## General Description

These circuits are synchronous, edge-sensitive, fully-programmable 4-bit counters. The counters feature both conventional totem-pole and TRI-STATE outputs; such that when the outputs are in the high impedance mode, they can be used to enter data from the bus lines. In addition, the clear input operates completely independent of all other inputs. During the programming operation, data is loaded into the flip-flops on the positive-going edge of the clock pulse. To facilitate cascading of these counters, the MAX COUNT output can be tied directly into the count enable input of the next counter.

The I/O pins are used as inputs when they are TRI-STATED, and the $\overline{\text { LOAD }}$ input is Low. They are outputs and active when LOAD input is High and OD is Low.
H = High Level (Steady State)
L = Low Level (Steady State)
$\mathrm{X}=$ Don't Care including transitions
$a, b, c, d=$ The level of the steady state input at inputs $A, B, C, D$ respectively
$Q_{A 0}, Q_{B 0}, Q_{C 0}, Q_{D 0}=$ The level of $Q_{A}, Q_{B}, Q_{C}, Q_{D}$ respectively, before the indicated steady state input conditions were established.

Note: The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the "Electrical Characteristics" table are not guaranteed at the absolute maximum ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.

## LIFE SUPPORT POLICY

NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF NATIONAL SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform, when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
